

PulseIQ Enterprise

AI-Powered Data Intelligence Platform

PulseIQ Enterprise automates the journey from raw dataset to actionable business intelligence. Built with Python, Streamlit, Machine Learning, and Llama 3, the platform profiles datasets, evaluates data quality, generates executive reports, performs AI-assisted cleaning, and creates predictive models from a single upload.

Core Capabilities

- Automated dataset profiling and metadata discovery
- Data quality scoring and health assessment
- Missing value, duplicate, outlier, and anomaly detection
- AI-assisted category standardization and cleaning
- Executive intelligence reports and recommendations
- Automated target detection and predictive modeling
- Feature importance analysis and business insights

Business Impact

Reduces manual data assessment effort, improves confidence in analytics, and helps decision-makers identify risks, opportunities, and key drivers faster through automation and AI.
